

Investment Decision Support The Benefits of IDS

Link Strategy to Execution

IDS is the first product worldwide to directly link strategic outcomes to portfolio configuration, enabling decision makers to make evidence based choices in a complex and rapidly changing environment using an advanced mathematical engine.

Competitive Edge

The scenario planning capability of IDS allows you to play with your competitive strategy, choose the one that's most likely to succeed, and change it on-the-fly. Instead of hoping the strategy works you can now compare, choose the most promising and adjust as you go.

Agility & Responsiveness

IDS tracks your project actuals to flag changing conditions, escalate impending problems, and enable you to recalculate your baseline. This gives you the power to change your portfolio configuration on-the-fly and resolve unexpected events and bottlenecks before they become problematic.

Budget Optimisation

IDS uses advanced mathematics to help you optimize the benefits you can derive from your entire portfolio, instead of optimizing per project.

Confidence & Defendability

IDS provides confidence and defendability by combining a rigorous methodology with a user-friendly environment that presents your choices in a clear and transparent way.

Intelligent Business

IDS helps your business learn and improve by gathering hard evidence and using that to improve the accuracy of your estimates and assumptions.

Compliance

IDS is fully compliant with the P3M3 maturity model.

State of the Art

IDS is the only system in the world that provides a practical solution to the level of complexity encountered in portfolio configuration and management. On top of that IDS offers:

- one of the most advanced user interfaces in the portfolio management space
- a distributed cloud based SaaS solution
- incredible value due to rapid implementation and high yield
